The Actor’s Life Janna Fischer 2017-11-14 Janna Fischer’s Hollywood journey began at the age of 22 when she moved to Los Angeles from her hometown of St. Louis. With a theater degree in hand, she was determined, she was confident, she was ready to work hard. So, what could go wrong? Uh, basically everything. The path to being a professional actor was so much more vast and competitive than she’d determined, she was confident, she was ready to work hard. So, what could go wrong? Uh, basically everything. The path to being a professional actor was so much more vast and competitive than she’d imagined. It would be eight long years before she landed her iconic role on The Office, nearly a decade of frustration, struggle, rejection and doubt. If only she’d had a handbook for the aspiring actor. Or, better yet, someone to show her the way—an established actor who could educate her about the business, manage her expectations, and reassure her in those moments of despair. Janna wants to be that person for you. With amusing candor and wit, Fischer spells out the nuts and bolts of getting established in the profession, based on her own memorable and hilarious experiences. She tells you how to get the right headshot, what to look for in representation, and the importance of joining forces with other like-minded artists and creating your own work— invaluable advice personally acquired from many years of struggle. She provides helpful hints on how to be gutsy and take risks, the tricks to good auditioning and callbacks, and how not to fall for certain scams (auditions in a guy’s apartment are probably not legit—or at least not for the kind of part you’re looking for!). Her inspiring, helpful guidance feels like a trusted friend who's made the journey, and has now returned to walk beside you, pointing out the pitfalls as you blaze your own path towards the life of a professional actor.

The Shock Doctrine Naomi Klein 2010-04-01 The bestselling author of No Logo shows how the global “free market” has exploited crises and shock for three decades, from Chile to Iraq In her groundbreaking report, Naomi Klein introduced the term “disaster capitalism.” Whether covering Baghdad after the U.S. occupation, Sri Lanka in the wake of the tsunami, or New Orleans post-Katrina, she witnessed something remarkably similar. People still reeling from catastrophe were being hit again, this time with economic “shock treatment,” losing their land and homes to rapacious corporate makeovers. The Shock Doctrine retells the story of the most dominant ideology of our time, Milton Friedman’s free market economic revolution. In contrast to the popular myth of this movement’s peaceful global victory, Klein shows how it has exploited moments of shock and extreme violence in order to implement its economic policies in so many parts of the world from Latin America and Eastern Europe to South Africa, Russia, and Iraq. At the core of disaster capitalism is the use of cataclysmic events to advance radical privatization combined with the privatization of the disaster response itself. Klein argues that by capitalizing on crises, created by nature or war, the disaster capitalism complex now exists as a booming new economy, and is the violent culmination of a radical economic project that has been in the making for fifty years.

Triumph Bonneville Ian Falloon 2019-07-17 Triumph Bonneville: 60 Years is a celebration of one of motorcycling’s most iconic and beloved bikes. First manufactured in Great Britain in 1959, Triumph’s legendary model resonates deeply with motorcycle enthusiasts worldwide who love its style, sound, performance, and undeniable coolness. It’s no surprise that Triumph was Steve McQueen’s favorite ride. The Bonneville’s story is one of successes and challenges as Triumph grew steadily in the post-World War II decades to become America’s most successful “import” motorcycle marque. Triumph won every championship worth winning, owned the world speed record for fifteen years, and wooed Hollywood’s hottest stars. Bonneville was Triumph’s halo machine, one of the highest performance motorcycles of the 1960s. However, as competing marques eventually eclipsed the Bonneville in the 1970s, Triumph management struggled, leading first to bankruptcy and then to the demise of the company in 1983. Triumph was resurrected by British industrialist John Bloor in the late 1990s to become a twenty-first century global success story, which includes a revived and thoroughly retro-contemporary Bonneville range.

Marine Diesel Engines Nigel Calder 2003 Nigel Calder, a diesel mechanic for more than 25 years, is also a boatbuilder, cabinemaker, and machinist. He and his wife built their own cruising sailboat, Nada, a project they completed in 1984. Calder is author of numerous articles for Yachting Monthly and many other magazines worldwide, as well as the bestselling Boatswain’s Practical and Technical Cruising Manual and Boatswain’s Mechanical and Electrical Manual, both published by Adlard Coles Nautical. Here, in this goldmine of a book, is everything the reader needs to keep their diesel engine running cleanly and efficiently. It explains how diesel engines work, defines new terms, and lifts the veil of mystery that surrounds such engines. Clear and logical, this extensively illustrated guide will enable the reader to be their own diesel mechanic. As Nigel Calder says: “There is no reason for a boater not to have a troublefree relationship with a diesel engine. All one needs is to set the engine up correctly in the first place, to pay attention to routine maintenance, to have the knowledge to spot early warning signs of impending trouble, and to have the ability to correct small problems before they become large ones.”

Bulk Material Handling Michael Rivkin Ph.D. 2018-09-15 Tens of thousands of mechanical engineers are engaged in the design, building, upgrading, and optimization of various material handling facilities. The peculiarity of material handling is that there are numerous technical solutions to any problem. The professional personal selection of the optimal solution is as critical as the technical component. Michael Rivkin, Ph.D., draws on his decades of experience in design, construction, upgrading, optimization, troubleshooting, and maintenance throughout the world, to highlight topics such as: • physical principles of various material handling systems; • considerations in selecting technically efficient and environmentally friendly equipment; • best practices in upgrading and optimizing existing bulk material handling facilities; • strategies to select proper equipment in the early phases of a new project. Filled with graphs, charts, and case studies, the book also includes bulleted summaries to help mechanical engineers without a special background in the field of material handling find optimal solutions to everyday problems.

Teach Me To Love / Man On The Make Vinyl Fields 2019-09-04 As a college professor, the town respected him. As a husband who could not pay his way - his wife despised him. As Peter Waring said bitterly after she walked out on him, "Maybe I'm a college teacher - but damn it, I'm also a man! I want to live like a man . . . love like a man . . . Yet how can he be? Like most faculty members, he had to burn the midnight oil doing research, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redeemable—even when Conley’s sassy kids show him the limits of his profession. Parentology teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You'll be laughing and learning at the same time.

Parentology Dalton Conley 2014-03-18 An award-winning scientist offers his unorthodox approach to childrearing: “Parentology is brilliant, jaw-droppingly funny, and full of wisdom.bound to change your thinking about parenting and its conventions” (Amy Chua, author of Battle Hymn of the Tiger Mother). If you’re like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeless religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In Parentology, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redeemable—even when Conley’s sassy kids show him the limits of his profession. Parentology teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You'll be laughing and learning at the same time.
