Everything We Hoped For Pip Adam 2011-02-01 An unusually strong first book, this collection of short stories depends on exquisitely crafted surfaces that conceal shocking emotional force. Three of the stories are obliquely connected and feature young women on the edge. In the first of these, a new mother contemplates her new baby; in the second, a girl finds herself in rehab; and in the final story, the main character goes to jail. Other characters include a New Zealand serviceman returned from active duty in Dili, the employees of a $2 shop, and a vegan couple at a Samaan resort.

Director's Cut John Waters 1997 John Waters, famed underground director of such outrageous, cult classics as "Pink Flamingos, Polyester, Hairspray, Cry Baby" and "Serial Mom", "re-directs" forgotten art films, obscure melodramas, lurid pot-boilers and his own early films in the form of photographic story boards made up of stills. The resulting work is this brilliant twist-off from Waters' absurd, comic view of life, and the images are as funny and delightfully edged as the very best of his films. Waters shakes the fantasies of normalcy into a new, often delicious, taste of Heaven. 165 photos, 150 in color.

The Master Switch Tim Wu 2010-11-02 A New Yorker and Fortune Best Book of the Year "A must-read for all Americans who want to remain the ones deciding what they can read, watch, and listen to." —Arianna Huffington Analyzing the strategic maneuvers of today's great information powers—Apple, Google, and an eerily resurgent AT&T—Tim Wu uncovers a time-honored pattern in which invention begets industry and industry begets empire. It is easy to forget that every development in the history of the American information industry—from the telephone to radio to film—once existed in an open and chaotic marketplace inhabited by entrepreneurs and utopians, just as the Internet does today. Each of these, however, grew to be dominated by a monopolist or cartel. In this pathbreaking book, Tim Wu asks: will the Internet follow the same fate? Could the Web—the entire flow of American information—come to be ruled by a corporate levithian in possession of "the master switch"? Here, Tim Wu shows how a battle royale for the Internet's future is brewing, and this is one war we dare not tune out.

discourses, often allegorizing the deceitfulness and impermanence of this world as well as the futility of earthly strife. It was frequently woven into arguments against worldly amusements such as the stage: Commercial theatre was declared an undesirable competitor of God's well-ordered world drama. Early modern dramatists often reacted to this development by appropriating the metaphor, and in an ingenuous twist, some playwrights even appropriated its anti-theatrical impetus: Early modern theatre seemed to discover a denial of its own theatricality at its very core. Drama was found to succeed best when it staged itself as a great unmasking. To investigate the reasons and effects of these developments, the anthology examines the metaphorical uses of theatre in plays, pamphlets, epics, treatises, legal proclamations and other sources.

The Story of the Sikhs Sarbpreet Singh 2021-06-30 The power of storytelling meets the colourful history of the Sikh faith in The Story of the Sikhs. In this book, author Sarbpreet Singh helps us reimagine the lives of the Sikh Gurus through a rich narrative that focuses on storytelling that intricately weaves in selections from the Guru Granth Sahib, the Dasam Granth and epic Braj poetry. Starting from the birth of the first guru, Guru Nanak, the book charts the lives of the ten Gurus. Through carefully curated stories, the book does not just show the egalitarian ideals and compassionate worldview that have come to define the faith, but also sheds light on the historical context that defined the foundational principles which guided Sikhs during the era of each Guru. Sarbpreet has deliberately approached this retelling as a storyteller rather than as a student of history in an attempt to make the work accessible and non-scholarly. Immersive and expansive, The Story of the Sikhs is a tour de force that weaves a multi-dimensional tapestry of narrative and poetry.

Parenthood Dalton Conley 2014-03-18 An award-winning scientist offers his unorthodox approach to childrearing: "Parenthood is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions" (Amy Chua, author of Battle Hymn of the Tiger Mother). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on time-worn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In Parenthood, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley's sassy kids show him the limits of his profession. Parenthood teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You'll be laughing and learning at the same time.

But when it's revealed that Sadie fled home after the brutal murder of her little sister, Mattie, West travels to the small town of Cold Creek, Colorado, to uncover what happened. Sadie has no idea that her journey to avenge her sister will soon become the subject of a blockbuster podcast. But as West traces her path to the darkest, most dangerous corners of big cities and small towns, a deeply unsettling mystery begins to unfold—one that's bigger than them both. Can he find Sadie before it's too late? It will haunt you long after you reach the final page.

Migrant Children in State/Quasi-state Schools in Urban China Hui Yu 2021-11-19 Highlighting the changing landscape of Chinese urban state schools under the pressure of recruiting a tremendous number of migrant children, this book examines the quality of state educational provisions from demographic, institutional, familial and cultural angles. Rooted in rich qualitative data from five Chinese metropolitan cities, it identifies the demographic changes in many state schools of becoming ‘migrant majority’ and the institutional reformation of ‘interim quasi-state’ schools under a low cost and inferior schooling approach. This book also digs into the ‘black box’ of cultural reproduction in school and family processes, revealing both a gloomy side of many migrant children’s academic underachievement as a result of troubled home-school relations and a bright side that social inclusion of migrant children in state school promotes their adaptation to urban life. The author concludes that migrant children’s experiences in state (and quasi-state) schools turn them into a generation of ‘new urban working-class’. The monograph will be of interest to scholars, students, practitioners and policymakers who want to better understand educational equality for migrants and other marginalised groups.

Lost in a Good Game Pete Etchells 2019-04-04 'Etchells writes eloquently ... A heartbreak of a demonstrated pastime' The Times 'Once in an age, a piece of culture comes along that feels like it was specifically created for you, the beats and words and ideas are there because it is your life the creator is describing. Lost in A Good Game is exactly that. It will touch your heart and mind. And even if Bowser, Chun-li or Q-Bert weren’t crucial parts of your youth, this is a flawless victory for everyone' Adam Rutherford When Pete Etchells was 14, his father died from motor neurone disease. In order to cope, he immersed himself in a virtual world - first as an escape, but later
to try to understand what had happened. Etchells is now a researcher into the psychological effects of video games, and was co-author on a recent paper explaining why WHO plans to classify ‘game addiction’ as a danger to public health are based on bad science and (he thinks) are a bad idea. In this, his first book, he journeys through the history and development of video games - from Turing’s chess machine to mass multiplayer online games like World of Warcraft - via scientific study, to investigate the highs and lows of playing and get to the bottom of our relationship with games - why we do it, and what they really mean to us. At the same time, Lost in a Good Game is a very unusual memoir of a writer coming to terms with his grief via virtual worlds, as he tries to work out what area of popular culture we should classify games (a relatively new technology) under.

**The Distracted Mind**

Adam Gazzaley 2017-10-27 A “brilliant and practical” study of why our brains aren’t built for multimedia multitasking—and how we can learn to live with technology in a more balanced way (Jack Kornfield, author of The Wise Heart) Most of us will freely admit that we are obsessed with our devices. We pride ourselves on our ability to multitask—read work email, reply to a text, check Facebook, watch a video clip. Talk on the phone, send a text, drive a car. Enjoy family dinner with a glowing smartphone next to our plates. We can do it all, 24/7! Never mind the errors in the email, the near-miss on the road, and the unheard conversation at the table. In _The Distracted Mind_, Adam Gazzaley and Larry Rosen—a neuroscientist and a psychologist—explain why our brains aren’t built for multitasking, and suggest better ways to live in a high-tech world without giving up our
modern technology. The authors explain that our brains are limited in their ability to pay attention. We don’t really multitask but rather switch rapidly between tasks. Distractions and interruptions, often technology-related—referred to by the authors as “interference”—collide with our goal-setting abilities. We want to finish this paper/spreadsheet/sentence, but our phone signals an incoming message and we drop everything. Even without an alert, we decide that we “must” check in on social media immediately. Gazzaley and Rosen offer practical strategies, backed by science, to fight distraction. We can change our brains with meditation, video games, and physical exercise; we can change our behavior by planning our accessibility and recognizing our anxiety about being out of touch even briefly. They don’t suggest that we give up our devices, but that we use them in a more balanced way.
