## **The Oxford Handbook of the Economics of Networks**

Yann Bramoullé 2016-03-01 The Oxford Handbook of the Economics of Networks represents the frontier of research into how and why networks they form, how they influence behavior, how they help govern outcomes in an interactive world, and how they shape collective decision making, opinion formation, and diffusion dynamics. From a methodological perspective, the contributors to this volume devote attention to theory, field experiments, laboratory experiments, and econometrics. Theoretical work in network formation, games played on networks, repeated games, and the interaction between linking and behavior is synthesized. A number of chapters are devoted to studying social process mediated by networks. Topics here include opinion formation, diffusion of information and disease, and learning. There are also chapters devoted to financial contagion and systemic risk, motivated in part by the recent financial crises. Another section discusses communities, with applications including social trust, favor exchange, and social collateral; the importance of communities for migration patterns; and the role that networks and communities play in the labor market. A prominent role of networks, from an economic

perspective, is that they mediate trade. Several chapters cover bilateral trade in networks, strategic intermediation, and the role of networks in international trade. Contributions discuss as well the role of networks for organizations. On the one hand, one chapter discusses the role of networks for the performance of organizations, while two other chapters discuss managing networks of consumers and pricing in the presence of network-based spillovers. Finally, the authors discuss the internet as a network with attention to the issue of net neutrality.

### **Biodiversity in Environmental Assessment**

Roel Slootweg 2009-11-12 Human induced development activities are introduced with insufficient attention to their consequences for our living environment, even in cases where environmental assessments have been carried out. This apparent lack of attention to biodiversity in environmental assessment is rooted in the difficulties we have in adequately addressing biodiversity within the scope, time frame and budget allocated for assessments. This book provides a conceptual background and practical approaches to overcome these difficulties. It integrates the objectives of the Convention on Biological Diversity, its ecosystem approach, and the conceptual framework of the Millennium Ecosystem Assessment into a comprehensive approach to biodiversity in environmental assessment. It highlights the need to consider the value of biodiversity based on its use by each stakeholder, addresses the importance of both social and economic development to reach the Millennium Development Goals, and provides insights into ways to balance present and future needs.

**To Kill a Mockingbird** Harper Lee 2014-07-08 Voted America's Best-Loved Novel in PBS's The Great American Read Harper Lee's Pulitzer Prize-winning masterwork of honor and injustice in the deep South—and the heroism of one man in the face of blind and violent hatred One of the most cherished stories of all time, *To Kill a Mockingbird* has been translated into more than forty languages, sold more than forty million copies worldwide, served as the basis for an enormously popular motion picture, and was voted one of the best novels of the twentieth century by librarians across the country. A gripping, heart-wrenching, and wholly remarkable tale of coming-of-age in a South poisoned by virulent prejudice, it views a world of great beauty and savage inequities through the eyes of a young girl, as her father—a crusading local lawyer—risks everything to defend a black man unjustly accused of a terrible crime.

**Earth System Law: Standing on the Precipice of the Anthropocene** Timothy Cadman 2021-11-30 This book systematically explores the emerging legal discipline of Earth System Law (ESL), challenging the closed system of law and marking a new era in law and society scholarship. Law has historically provided stability, certainty, and predictability in the ordering of social relations (predominantly between humans). However, in recent decades the Earth's relationship in law has changed with increasing recognition of the standing of Mother Earth, inherent rights of the environment (such as flora and fauna, rivers), and now recognition of the multiple relations of the Anthropocene. This book questions the fundamental assumption that 'the law' only applies to humans, and that the earth, as a system, has intrinsic rights and responsibilities. In the last ten years the planet has experienced its hottest period since human evolution, and by the year 2100, unless

substantive action is taken, many species will be lost, and planetary conditions will be intolerable for human civilisation as it currently exists. Relationships between humans, the biosphere, and all planetary systems must change. The authors address these challenging topics, setting the groundwork of ESL to ensure sustainable development of the coupled socio-ecological system that the Earth has become. Earth System Law is an interdisciplinary and transdisciplinary research project, and, as such, this book will be of great interest to researchers and stakeholders from a wide range of disciplines, including political science, anthropology, economics, law, ethics, sociology, and psychology.

*Debating Cultural Hybridity* Professor Pnina

Werbner 2015-01-08 Why is it still so difficult to negotiate differences across cultures? In what ways does racism continue to strike at the foundations of multiculturalism? Starting from the reality that personal identities are multicultural identities, *Debating Cultural Hybridity* illuminates the complexity and the flexibility of culture and identity, defining their potential openness as well as their closures, to show why anti-racism and multiculturalism are today still such hard roads to travel.

*MasterClass in Science Education* Keith S. Taber 2018-12-13 Worried about teaching natural selection, submicroscopic particle models or circuits? Keith S. The author introduces the three pillars of this approach: subject knowledge, pedagogic knowledge, and classroom research. The body of subject knowledge in the sciences is both vast and constantly evolving as it is challenged, updated and developed, and this text supports you to understand the dynamic nature of knowledge and the implications this has for your teaching. Taber shows how to use a knowledge-in-action approach, enacting knowledge in the complex and dynamic classroom environment. What's in a Name Ana Luísa Amaral 2019-02-26 Poems of effervescent grace from one of the best-known and best-loved poets of Portugal With the elliptical looping of a butterfly alighting on one's sleeve, the poems of Ana Luísa Amaral arrive as small hypnotic miracles. Spare and beautiful in a way reminiscent both of Szyborska and of Emily Dickinson (it comes as no surprise that Amaral is the leading Portuguese translator of Dickinson), these poems—in Margaret Jull Costa's gorgeous English versions—seamlessly interweave the everyday with the dreamlike and ask “What's in a name?” “How solid is a name if answered to,” Amaral answers, but “like the Rose—no, like its perfume: ungovernable. Free.” There is much freedom within Amaral's poetry, room for mysteries to multiply, and yet her beautiful lines are as clear as water: And that time of smiles

Which does, incidentally, really exist, I swear, as does the fire And the invisible sea, which with nothing will agree

Pseudoscience Allison B. Kaufman 2018-02-02 Case studies, personal accounts, and analysis show how to recognize and combat pseudoscience in a post-truth world. In a post-truth, fake news world, we are particularly susceptible to the claims of pseudoscience. When emotions and opinions are more widely disseminated than scientific findings, and self-proclaimed experts get their expertise from Google, how can the average person distinguish real science from fake? This book examines pseudoscience from a variety of perspectives, through case studies, analysis, and personal accounts that show how to recognize pseudoscience, why it is so widely accepted, and how to advocate for real science. Contributors examine the basics of pseudoscience, including issues of cognitive bias; the costs of pseudoscience, with accounts of naturopathy and logical fallacies in the anti-vaccination movement; perceptions of scientific soundness; the mainstream presence of “integrative medicine,” hypnosis, and parapsychology; and the use of case studies and new media in science advocacy. **Varamo** César Aira 2012-02-22 The surprising, magnificent story of a Panamanian government employee who, one day, after a series of troubles, writes the celebrated masterwork of modern Central American poetry. Unmistakably the work of César Aira, Varamo is about the day in the life of a hapless government employee who, after wandering around all night after being paid by the Ministry in counterfeit money, eventually writes the most celebrated masterwork of modern Central American poetry, *The Song of the Virgin Boy*. What is odd is that, at fifty years old, Varamo "hadn't previously written one sole verse, nor had it ever occurred to him to write one." Among other things, this

novella is an ironic allegory of the poet's vocation and inspiration, the subtlety of artistic genius, and our need to give literature an historic, national, psychological, and aesthetic context. But Aira goes further still — converting the ironic allegory into a formidable parody of the expectations that all narrative texts generate — by laying out the pathos of a man who between one night and the following morning is touched by genius. Once again Aira surprises us with his unclassifiable fiction: original and enjoyable, worthy of many a thoughtful chuckle, Varamo invites the reader to become an accomplice in the author's irresistible game. *Mickelsson's Ghosts* John Gardner 2008 The critically acclaimed final masterwork of John Gardner: an American novel haunted with macabre and cerebral elements.

*A Breath of Life* Clarice Lispector 2012-06-13 A mystical dialogue between a male author and his creation, this posthumous work has never before been translated, and is a book of particular beauty and strangeness. A mystical dialogue between a male author (a thinly disguised Clarice Lispector) and his/her creation, a woman named Angela, this posthumous work has never before been translated. Lispector did not even live to see it published. At her death, a mountain of fragments remained to be "structured" by Olga Borelli. These fragments form a dialogue between a god-like author who infuses the breath of life into his creation: the speaking, breathing, dying creation herself, Angela Pralini. The work's almost occult appeal arises from the perception that if Angela dies, Clarice will have to die as well. And she did.
