Increasing in number and share of the total population while at the same time being relatively well-off, this market segment can be seen as very attractive and promising, although still very underdeveloped in terms of product and service offerings. This book offers a thorough and up-to-date analysis of the challenges and opportunities in leveraging innovation, technology, product development and marketing for elder consumers and employees. Key lessons are drawn from the Japanese lead market as well as other select countries.

How Bad Are Bananas? Mike Berners-Lee 2011-04-01 Part green-lifestyle guide, part popular science, How Bad Are Bananas? is the first book to provide the information we need to make carbon-savvy purchases and informed lifestyle choices and to build carbon considerations into our everyday thinking. The book puts our decisions into perspective with entries for the big things (the World Cup, volcanic eruptions, the Iraq war) as well as the small (email, ironing, a glass of beer). And it covers the range from birth (the carbon footprint of having a child) to death (the carbon impact of cremation). Packed full of surprises — a plastic bag has the smallest footprint of any item listed, while a block of cheese is bad news — the book continuously informs, delights, and engages the reader. Solidly researched and referenced, the easily digestible figures, statistics, charts, and graphs (including a section on the carbon footprint of various foods) will encourage discussion and help people to make up their own minds about their consumer choices.

The Conservative Case for Class Actions Brian T. Fitzpatrick 2019-11-01 Since the 1960s, the class action lawsuit has been a powerful tool for holding businesses accountable. Yet years of attacks by corporate America and unfavorable rulings by the Supreme Court have left its future uncertain. In this book, Brian T. Fitzpatrick makes the case for the importance of class action litigation from a surprising political perspective: an unabashedly conservative point of view. Conservatives have opposed class actions in recent years, but Fitzpatrick argues that they should see such litigation not as a danger to the economy, but as a form of private enforcement of the law. He starts from the premise that all of us, conservatives and libertarians included, believe that markets need at least some rules to thrive, from laws that enforce contracts to laws that prevent companies from committing fraud. He also reminds us that conservatives consider the private sector to be superior to the government in most areas. And the relatively little-discussed intersection of those two beliefs is where the benefits of class action lawsuits become clear: when corporations commit misdeeds, class action lawsuits enlist the private sector to intervene, resulting in a smaller role for the government, lower taxes, and, ultimately, more effective solutions. Offering a novel argument that will surprise partisans on all sides, The Conservative Case for Class Actions is sure to breathe new life into this long-running debate.

Smart Grid (R)Evolution Jennie C. Stephens 2015-02-26 The term 'smart grid' has become a catch-all phrase to represent the potential benefits of a revamped and more sophisticated electricity system that can fulfil several societal expectations related to enhanced energy efficiency and sustainability. Smart grid promises to enable improved energy management by utilities and by consumers, to provide the ability to integrate higher levels of variable renewable energy into the electric grid, to support the development of microgrids, and to engage citizens in energy management. However, it also comes with potential pitfalls, such as increased cybersecurity vulnerabilities and privacy risks. Although discussions about smart grid have been dominated by technical and economic dimensions, this book takes a sociotechnical systems perspective to explore critical questions shaping energy system transitions. It will be invaluable for advanced students, academic researchers, and energy professionals in a wide range of disciplines, including energy studies, energy policy, environmental science, sustainability science and environmental engineering.
