Dalit Households in Village Economies V. K. Ramachandran 2014 Caste is an institution of oppression and social discrimination specific to South Asia, more so to India. Central to the caste system were the status assigned to the Dalit people and the criminal practice of untouchability. Caste is embedded in production relations. It is an impediment to the growth of the productive forces, and a bulwark against the revolutionary overthrow of the ruling classes. Although there have been, in recent years, new scholarship and new attempts to understand the socio-economic conditions of life of Dalit people and households in India, it is still true, as a leading scholar in the field has written, that ‘very few empirical studies have tried to study the phenomenon of economic discrimination’. This book is an attempt to contribute to the study and understanding of economic deprivation and exclusion among Dalits in rural India. This first section deals with poverty and group discrimination. The second section has case studies - from Kerala, Tamil Nadu and West Bengal - on historical aspects of land, caste and social exclusion. The third section deals with contemporary fieldwork-based economic analyses from Tamil Nadu and Maharashtra. The last section has studies of Dalit households in village economies; the empirical base for these studies comes from the village-level data archive of the Project on Agrarian Relations (PARD) being conducted by the Foundation for Agrarian Studies.The articles in the book are evidence, in some cases, of direct discrimination, and in others of what has been described as differential impact discrimination. Most of all, they reflect cumulative discrimination and disadvantage.

Principles of Asynchronous Circuit Design Jens Sparsoe 2013-04-17 Principles of Asynchronous Circuit Design - A Systems Perspective addresses the need for an introductory text on asynchronous circuit design. Part I is an 8-chapter tutorial which addresses the most important issues for the beginner, including how to think about asynchronous systems. Part II is a 4-chapter introduction to Balsa, a freely-available synthesis system for asynchronous circuits which will enable the reader to get hands-on experience of designing high-level asynchronous systems. Part III offers a number of examples of state-of-the-art asynchronous systems to illustrate what can be built using asynchronous techniques. The examples range from a complete commercial smart card chip to complex microprocessors. The objective in writing this book has been to enable industrial designers with a background in conventional (clocked) design to be able to understand asynchronous design sufficiently to assess what it has to offer and whether it might be advantageous in their next design task.

Running Linux Matthias Kalle Dalheimer 2005-12-22 You may be contemplating your first Linux installation. Or you may have been using Linux for years and need to know more about adding a network printer or setting up an FTP server. Running Linux, now in its fifth edition, is the book you’ll want on hand in either case. Widely recognized in the Linux community as the ultimate getting-started and problem-solving book, it answers the questions and tackles the configuration issues that frequently plague users, but are seldom addressed in other books. This fifth edition of Running Linux is greatly expanded, reflecting the maturity of the operating system and the teeming wealth of software available for it. Hot consumer topics such as audio and video playback applications, groupware functionality, and spam filtering are covered, along with the basics in configuration and management that always have made the book popular. Running Linux covers basic communications such as mail, web surfing, and instant messaging, but also delves into the subtleties of network configuration—including dial-up, ADSL, and cable modems—in case you need to set up your network manually. The book can make you proficient on office suites and personal productivity applications—and also tells you what programming tools are available if you’re interested in contributing to these applications. Other new topics in the fifth edition include encrypted email and file systems, advanced shell techniques, and remote login applications. Classic discussions on booting, package management, kernel recompilation, and X configuration have also been updated. The authors of Running Linux have
anticipated problem areas, selected stable and popular solutions, and provided clear instructions to ensure that you’ll have a satisfying experience using Linux. The discussion is direct and complete enough to guide novice users, while still providing the additional information experienced users will need to progress in their mastery of Linux. Whether you’re using Linux on a home workstation or maintaining a network server, Running Linux will provide expert advice just when you need it.

**Drawings on a Bus**
Ellsworth Kelly 2007
Ellsworth Kelly made the drawings reproduced in this volume in the Fall of 1954. Published for the first time in this sketchbook facsimile, these drawings offer a rare and special glimpse into the distinguished artist’s working process at the dawn of his career. The inspiration for the drawings came to the artist while riding a bus. Inspired by the shadows cast across the pages of a book, the artist took out his pencil and quickly recorded the outlines of the shadows directly onto the pages. Upon returning to his studio, Kelly reached for a sketchbook and began developing the sketches in ink, experimenting with variations, cropping and layering the shadow forms to generate new ones. These black and white drawings became the source material for larger works, including some of the artist’s most celebrated canvases, such as Atlantic (1956) purchased by the Whitney Museum of American Art in 1957, which forms a part of their permanent collection.

**Explorations in Applied Geography**
ASHOK K. DUTT
2008-02-21
Applied geography, a new frontier in geographic discipline, distinguishes itself from other branches of geography through the application of geographical knowledge and its techniques in solving practical problems of the land and the environment. Explorations in Applied Geography is a felicitation volume in honour of Professor L.R. Singh, Department of Geography, University of Allahabad, who has established his international credentials as a leading exponent of Applied Geography. He considers public policy to be one of the applications of applied geographic principles, since many problems facing society today have a geographical dimension. To Professor L.R. Singh, Applied Geography is the strategy of the trinity of men, space and resources which need to be harmonized in advancing human well-being. This volume, contributed by geographers of eminence within the country and from other parts of the globe, focuses on the following thrust areas: • Natural and environmental hazards • Environmental change and management • Challenges of the human environment • Application of techniques of spatial analysis In a nutshell, the book emphasizes the important proactive role that the Applied Geography must play in the formulation of public policies and programmes for sustainable human development. This comprehensive and classic compendium will not only be useful to post-graduate students in geography but also provide new vistas in geographic research.

**Violence and Mental Health** Jutta Lindert 2015-02-25 Violence is one of the most important challenges, not only for public health systems, but also for public mental health. Violence can have immediate as well as long-term and even transgenerational effects on the mental health of its victims. This book provides a comprehensive and wide-ranging assessment of the mental health legacy left by violence. It addresses the issues as they affect states, communities and families, in other words at macro-, meso- and microlevels, beginning by describing the impact of violence on neurobiology and mental health, as well as the spectrum of syndromes and disorders associated with different forms of violence. The work moves on to tackle violence at the international—and intranational—level before zeroing in on the nature of violence in communities such as villages or city districts. It also examines the results of violence in the family. Each type of violence has distinct effects on mental health and in each chapter specific groups are explored in depth to demonstrate the heterogeneity of violence as well as the diversity of its outcomes in the realm of public mental health. Finally, the book addresses the notion of 'undoing violence' by detailing case studies of effective interventions and prevention occurring in countries, communities and families. These cases give us pause to reflect on the nature of resilience and dignity in the context of violence and mental health. All the chapters have been written by leading authors in the field and provide a state-of-the-art perspective. The authors, from different fields of expertise, facilitate interdisciplinary and international insights into the impact of violence on mental health.

**Stochastic Filtering Theory** G. Kallianpur 2010-12-03 This book is based on a seminar given at the University of California at Los Angeles in the Spring of 1975. The choice of topics reflects my interests at the time and the needs of the students taking the course. Initially the lectures were written up for publication in the Lecture Notes series. How ever, when I accepted Professor A. V. Balakrishnan’s invitation to publish them in the Springer series on Applications of Mathematics it became necessary to alter the informal and often abridged style of the notes and to rewrite or expand much of the original manuscript so as to make the book as self-contained as possible. Even so, no attempt has been made to write a comprehensive treatise on filtering theory, and the book still follows the original plan of the lectures. While this book was in preparation, the two-volume English translation of the work by R. S. Liptser and A. N. Shiryaev has appeared in this series. The first volume and the present book have the same approach to the subject, viz. that of martingale theory. Liptser and Shiryaev go into greater detail in the discussion of statistical applications and also consider inter polation and extrapolation as well as filtering.
